marketing text Classifications	The TP3 connection module for potential connection with screw interface between the connection field and the SIMATIC S7. This adapted to the respective task to the transport of the fastest and such connection for the fastest and such content of the faste	otherwise specified) The TP3 connection module for a 3-wire connection with 8 channels and potential connection with screw terminals without LED for signalling forms the interface between the connection cables of the peripherals coming from the field and the SIMATIC S7. This is mounted on the DIN rail and is exactly adapted to the respective task thanks to its functionality with screw terminals. This connection module is part of the fully modular SIMATIC TOP connect connection for the fastest and safest system cabling. In addition to low wiring costs, error sources in cabling can be significantly reduced. Sensors and actuators from the peripherals are combined with the connection modules of SIMATIC TOP connect and connected to the SIMATIC S7-300/1500 via cable and front plug-in module.
